DATE MAILED: 05/03/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/031,871

Applicant(s)

KAWAMOTO ET AL.

Examiner

Tarifur R Chowdhury

Art Unit

2871

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 March 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 3-10 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1 and 3-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 24 January 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03/25/04 has been entered.

Claim Objections

2. Claims 3-10 are objected to because of the following informalities:

In claim 3, "2" should be changed to -1--.

In claims 4, 5 and 7, "1 through 3" should be changed to -1 and/or 3—since claim 2 has been canceled.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Scheffer, USPAT 4,032,218.**

5. Scheffer discloses (col. 2, lines 54-60) and shows in Fig. 1a, a polarizing member comprising a cholesteric liquid crystal layer (7), a quarter-wave plate (6), and a liquid crystal cell (3) (applicant's optical rotatory layer), wherein the quarter-wave plate (6) is interposed between the cholesteric liquid crystal layer (7) and the optical rotatory layer (3), the optical rotatory layer (3) being adjacent to the quarter-wave plate (6).

Accordingly, claim 1 is clearly anticipated.

As to claim 3, it is also clear from Fig. 1a as well as the disclosure (col. 2, line 62 – col. 3, line 6) of Scheffer that the polarizing member also comprising an absorption type polarizer (2) disposed on an upper side of the optical rotatory layer (3), wherein a major or minor axis of the optical rotatory layer in each of opposite surfaces of the optical rotatory layer is parallel to a plane of polarization of light linearly polarized by a combination of the cholesteric liquid crystal layer (7) and the quarter-wave plate (6) to an axis of polarization of the absorption-type polarizer (2)

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 4, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Scheffer as applied to claims 1 and 3 above and in view of Itoh et al., (Itoh), EP 0457607.

4. Scheffer differs from the claimed invention because he does not explicitly disclose that the optical rotatory layer is made of a polymer containing a nematic liquid crystal monomer and optically active monomers as components.

Itoh discloses that an optical rotatory layer that is made of a polymer containing a nematic liquid crystal monomer and an optically active monomer as components. Itoh also discloses that such an optical rotatory layer is advantageous since it permits a high accuracy in the wide range of wavelengths and in the fields of display (page 2, lines 1-2, 17-18).

Itoh is evidence that ordinary workers in the art would find a reason, suggestion or motivation to use an optical rotatory layer that is made of a polymer containing a nematic liquid crystal monomer and optically active monomers as components.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the polarizing member of Scheffer by substituting the optical rotatory layer with an optical rotatory layer that is made of a polymer containing a nematic liquid crystal monomer and optically active monomers as

components so that a high accuracy in the wide range of wavelengths and in the fields of display can be obtained, as per the teachings of Itoh.

Accordingly, claim 4 would have been obvious.

As to claims 5 and 6, setting the condition for the degree of optical rotation of the optical rotatory layer to be satisfactory does not constitute a special design restriction. The degree of optical rotation is such as can be decided in accordance with factors such as required performance traits.

5. Claims 1 and 3-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kishimoto Keiko (Kishimoto), JP 09-329779 in view of Itoh et al., (Itoh), EP 0457607.

6. Kishimoto discloses a polarizing member comprising a cholesteric liquid crystal layer combined with a quarter-wave plate.

Kishimoto differs from the claimed invention because he does not explicitly disclose the optical rotatory layer.

Itoh discloses an optical rotator. Itoh also discloses that optical rotator is used for the purpose of causing an azimuthal rotation of linear polarization or of elliptic polarization (page 2, lines 6-8).

Itoh is evidence that ordinary workers in the art would find a reason, suggestion or motivation to use an optical rotator.

Therefore, it would have been obvious to one of ordinary skill in the art at the

time of the invention was made to modify the polarizing member of Kishimoto by employing an optical rotator so that azimuthal rotation of linear polarization or of elliptic polarization is achieved, as per the teachings of Itoh.

Further, since Itoh teaches the use of an optical rotatory layer to achieve rotation of polarization and Kishimoto discloses a polarizing member having a cholesteric liquid crystal layer and a quarter-wave plate, it would have been obvious to one of ordinary skill in the art that the modified structure would have the quarter-wave plate in between the cholesteric liquid crystal layer and the optical rotatory layer for achieving rotation of polarization.

Further the combination of Kishimoto and Itoh indicate a combination of an optical rotatory layer and an absorption type polarizing plate. It is also specified that the long axis or the short axis of the optically active layer is parallel to the polarizing surfaces of linear polarization due to the cholesteric layer and quarter-wave plate of the front and rear surfaces of the optically rotatory layer and the axis of polarization of the absorption type polarizing plate. However, considering the transmission of polarized light, stipulating the optically active layer so as to match the direction of the polarized wave of polarized light and the axis of polarization, etc., of the polarizing member, including the polarizing plates on either side of the optically active layer, is obvious to a person skilled in the art from the point of view of the technical significance of providing an optically active layer.

Accordingly, claims 1 and 3 would have been obvious.

As to claim 4, Itoh discloses that the optical rotatory layer is made of a polymer

containing a nematic liquid crystal monomer and an optically active monomer as components.

As to claims 5 and 6, setting the condition for the degree of optical rotation of the optical rotatory layer to be satisfactory does not constitute a special design restriction. The degree of optical rotation is such as can be decided in accordance with factors such as required performance traits.

As to claims 7-10, Kishimoto discloses and shows that the polarizing member is disposed on the back side (opposite to a visual side) of the liquid crystal cell.

Response to Arguments

7. Applicant's arguments filed on 03/25/04 have been fully considered but they are not persuasive.

In response to applicant's argument that from the teaching of Itoh one would not have been motivated to place the rotatory layer adjacent to the quarter-wave plate because the function of the rotatory layer in Itoh could be achieved if it were next to the cholesteric LCD, it is respectfully pointed out to applicant that since Itoh teaches that the purpose of having an optical rotatory layer is to rotate a polarization plane of linearly polarized light one of ordinary skill in the art would be motivated to either place the optical rotatory layer next to the cholesteric layer adjacent to the quarter-wave plate because that way it will achieve the function such as rotating a polarization plane of linearly polarized light. It is also pointed out to applicant that a quarter-wave plate is capable of changing linear polarization into circular polarization as well as circular polarization into linear polarization.

Therefore, the rejection based on Kishimoto and Itoh was proper and thus maintained.

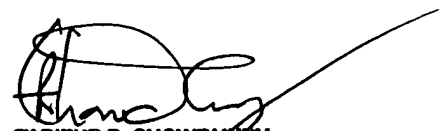

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tarifur R Chowdhury whose telephone number is (571) 272-2287. The examiner can normally be reached on M-Th (6:30-5:00) Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
